

In order to run:

\*all commands are relative to the MacOS

Please download and install mysql from the link provided:

<https://dev.mysql.com/downloads/mysql/>

And create a database with the following attributes:

```
app.config['MYSQL_HOST'] = 'localhost'
app.config['MYSQL_USER'] = 'root'
app.config['MYSQL_PASSWORD'] = 'temporary'
app.config['MYSQL_DB'] = 'mydatabase'
```

Make sure you have pip3 and virtualenv installed:

Then unzip the file and run the virtual environment using

\$ . bin/activate

Navigate to the js folder and use the command

\$ Python3 server.py

This starts up the flask server required for Room6

Then to play the game just open the index.html located in the base directory in preferably safari since chrome has some issues with saving cookies from local host.
